- Responsible for creating a new React web app, using Redux.
- Worked with several technologies, such as: Java EE/Spring boot, Flutter, React, Angular and Ionic.

dod
Curitiba, PR - BR (Remote)

React Developer (Freelancer)
Dec. 2018 - Feb. 2019

- Responsible for develop an app as proof of concept for an AI system in the educational environment.
- Developed integrations with Firebase real time database and ChartJS.

CISS S.A.
Dois Vizinhos, PR - BR

C++ Developer
Mar. 2017 - Mar. 2019

- Worked on a Supermarket POS App, which uses the C++ Qt framework and runs embedded in a Raspberry pi 3.
- Responsible for the adoption of a CI platform (Jenkins) and the implementation of unit tests in the project, what dramatically reduced the recurrence of bugs.

CISS S.A.

Dois Vizinhos, PR - BR

Full-stack Developer

Feb. 2014 - Mar. 2017

- Worked on a project that processes supermarket sales, by sending those sales to local government services and emitting sale receipts to the clients. Was one of the lead developers in this project.
- Project built with Java EE and AngularJS, deployed on the application server Wildfly v9.

CISS S.A.

Dois Vizinhos, PR - BR

PowerScript Developer

May 2011 - Jan. 2014

- Worked on an old ERP platform (desktop/client-server), developing new features and supporting the operations.
- Was part of several Scrum teams, from general maintenance to specialist teams, responsible for new modules/projects.

eEco Sistemas

Dois Vizinhos, PR - BR

PowerScript Developer

Nov. 2009 - Apr. 2011

- Worked with an old technology called PowerScript, creating new apps for desktop (Windows) and mobile (Windows SE) environment.
- Also, was responsible for supporting the operations.

Projects

Prada e-commerce App

ArcTouch

- Flutter, GoRouter, Cubit, GraphQL, Algolia

Feb 2026 to Present

New e-commerce App for Prada.

Responsible for the development of PLP (Product listing page), adding integrations with the CMS, to provide enriched content.

Responsible for integrations with Algolia for fast product discovery.

Communications App for bedside

Innovations Applied LLC

- Flutter, Cubit, Get It, Injectable

Dec 2025 to Apr 2026

New Communications App for bedside, connecting bedridden people with their family members.

It's a Flutter app design to be delivered to mobile and web environments, with a responsive design and supporting white-labeling.

Working solo, was responsible for the project creation, architecture definition, and for implementing all of the features.

Healthcare App

NTConsult/Tissue Health Plus

- Flutter, Riverpod, Zoom VideoSDK, gRPC

May 2025 to Dec 2025

New healthcare app, focused on wound care.

It's a Flutter app, that uses Riverpod for the state management and gRPC for backend communication.

Was responsible for Zoom VideoSDK integration, allowing app-to-app video calls using CallKit and PushKit on iOS. Also, was responsible for solving multiple frontend related tasks, as part of the release process.

Brokerage/Bank App

Sciensa/Genial Investimentos

- Flutter, Cubit, Modular, Clean architecture, Micro-frontends

Mar 2021 to May 2025

New Genial Investimentos app, using a micro-frontends and clean architecture approach.

It's a Flutter app, that uses Cubit/Bloc for the state management and the Modular package for dependecy injection and modules division.

This project was initially developed with unit tests and TDD was applied in some scenarios.

Had the opportunity to build integrations with a CMS for content delivery and with a feature toggle platform (Unleash), what had allowed enabling/disabling features on the fly.

It's a white label app, so that, the entire style can be customized to support partner's branding.

Vital signs reader app (Embedded)

Freelancer

- Flutter, Cubit, GetIt, GoRouter, Clean architecture, Flutter-pi

Oct 2024 to Present

App that runs embedded in a Raspberry Pi board and interact with peripherals like oximeter, temperature and blood pressure readers.

Developed using flutter-pi, a light-weight Flutter Engine Embedder for Raspberry Pi; GetIt for dependency injection; GoRouter for routing; and Cubit for state management.

Uses Dart FFI for serial port and USB integrations.

Had the opportunity to create this app from the ground up, defining the packages and the most suitable architecture.

Music industry investments App

MZIC

- Flutter, GoRouter, Clean architecture

Oct 2023 to Jan 2024

Was responsible to develop the music player in this app, consuming HLS (HTTP Live Streaming) audio source and reproducing a video as background (similar to Spotify).

Finclass - Financial education App

Grupo Primo - Through UDS Tecnologia

- Flutter, MobX, Modular

Jul 2020 to Mar 2021

Finclass is an app for financial education, which aims to deliver original and top-notch content to the users, focusing on personal financial management and investments.

It's a Flutter app, that uses MobX for state management and the Modular package for dependecy injection and modules division.

Project developed with unit tests, achieving a high code coverage (above 90%).

+Estampas - Clothes designing support platform

Grupo Soma - Through UDS Tecnologia

- React, NodeJS, MySql

Jul 2020 to Mar 2021

Acted as leader on the development of a web platform for clothes design. Was responsible for some training and workshops to spread knowledge with the team. Was responsible for introducing Redux into the app.

Also, was responsible for the back-end development using NodeJS.

AdGentes - Social network for missionaries

Kepha

- Flutter/Bloc/Modular, Java, Quarkus, MySQL, AWS ECR, ECS, RDS, S3

Mar 2019 to Jul 2020

Lead developer of the ”Ad Gentes” app, which is a social network that aims to get together missionaries who are spread around the world, working on charity projects.

App developed with Flutter and MVVM architecture.

During this project, had the opportunity to create the back-end services, using Java and the Quarkus framework.

Also, created and managed the client production environment, hosted in AWS (ECR, ECS, RDS and S3).

Had the opportunity to act as a leader and mentor, supporting other developers during this project.

SouDizimista - Tithing app

Kepha

- Flutter/Bloc, React, OneSignal, Firebase Auth, AWS ECR, EC2, S3

Mar 2019 to Jul 2020

Lead developer of the ”SouDizimista” app, which is an app that allows Christians to give their tithe or make donations to the church, using their credit cards. It makes part of an ecossystem of church management.

App developed with Flutter, but due to some Apple limitations regarding to donations, a web page in React was needed as well. This web page is opened in a webview, allowing iOS users to make their donations without feeling that they are in a web environment, outside of the app.

DízimoFiel - Tithing/Church management app

Kepha

- Ionic, Angular 5, Java, Swarm/Thorntail, ChartJS, PostgreSQL, AWS MediaConvert

Mar 2019 to Jul 2020

This app makes part of an ecossystem of church management. This is an tithe management app, used by local church managers.

This ecossystem has a Java back-end, using the Wildfly Swarm framework, a front-end with Angular 5 and an app built with Ionic 3.

Was responsible for new features creation and bug fixes on the entire platform.

dod e-Campus - AI applied to education environment

dod

- React, Firebase, ChartJS

Dec 2018 to Feb 2019

Was part of the development of a school management platform, which provides some AI analyzes in classroom.

Has worked in the front-end development with React, creating charts with ChartJS and Firebase real time database integration.

CISSLive PDV - Embedded POS for Supermarkets

CISS

- C++, Qt Creator, PostgreSQL

Mar 2017 to Feb 2019

Was part of the development of a POS called ”CISSLive PDV”, which runs embedded in a Raspberry pi 3 board. App developed with C++, using the Qt Creator framework.

Was responsible for create complex features, such as integration with payment platforms; real time recovery, restarting the app and resuming the purchase in the same state it was;

Besides, was responsible for implement unit tests and improve the CI (Jenkins).

Painel NFC-e - Supermarket sales processor

CISS

- Java EE, Angular, MongoDB, PostgreSQL

Feb 2014 to Mar 2017

Was part of a project that processes supermarket sales, sending it to local government entities and emitting sale receipts to the clients.

Was responsible for help the team to create this project from the ground up and was the only developer responsible for the operations in almost 2000 clientes for a year.

This project was built with Java EE and AngularJS, deployed on the application server Wildfly v9.

CISSPoder - ERP system for supermarkets

CISS

- PowerScript, PowerBuilder, DB2, PostgreSQL

May 2011 to Jan 2014

I worked on an ERP platform (desktop/client-server) using an old language called PowerScript.

Had the opportunity to develop new features to attend local legislations and taxes.

Had the opportunity to support the operations (More than 2000 clients).

Mobile POS for Windows CE

eEco Sistemas

- PowerScript, PowerBuilder, PocketBuilder

Nov 2009 to Apr 2011

I worked with an old language called PowerScript, creating new apps for desktop (Windows) and mobile (Windows CE) environments.

Also, was responsible for supporting the operations.
